INSTRUCTIONS

MODEL AVD-GSSB2T MONOCYCLE GENERATOR

S.N.:

WARRANTY

Avtech Electrosystems Ltd. warrants products of its manufacture to be free from defects in material and workmanship under conditions of normal use. If, within one year after delivery to the original owner, and after prepaid return by the original owner, this Avtech product is found to be defective, Avtech shall at its option repair or replace said defective item. This warranty does not apply to units   which have been dissembled, modified or subjected to conditions exceeding the applicable specifications or ratings. This warranty is the extent of the obligation assumed by Avtech with respect to this product and no other warranty or guarantee is either expressed or implied.

TABLE OF CONTENTS

FIG. 1: <u>MONOCYCLE GENERATOR TEST ARRANGEMENT</u>

GENERAL OPERATING INSTRUCTIONS

1)   The bandwidth capability of components and instruments used to display the monocycle generator output signal (attenuators, cables, connectors, etc.) should exceed 10 GHz.

2)   The use of a 40db attenuator will insure a peak input signal to the sampling scope of less than one volt.

3)   In general, the pulse generator delay control should be set in the 100nsec range. Other settings should be as shown in the above diagram.   The monocycle generator output is delayed with respect to the trigger input signal by about 75 ns (typically).

4)   The monocycle generator can withstand an infinite VSWR on the output port.

5)   The output frequency can be adjusted (slightly) by rotating the front panel 10 turn trim pot.   Clockwise rotation reduces the output frequency (and reduces the output spurious level).
