SPECIFICATIONS

Model designation:

AV-CPB-NWUA

Basic description:

Pomona Blue Box (Type #3230), but with the input and output BNC connectors replaced with SMA connectors linked with a wire on which a current probe will be clipped. The max current capacity should be 100A at 1% duty cycle, and 10A DC. The output connector should be female (a receptacle) such that modified striplines match it. The input connector should match (preferably directly, for convenience of use) the SMA output of our transformers from Avtech, also taking into account the working position of transformers, this box, and of the current probe.
