INSTALLATION INSTRUCTIONS

- 1) Remove the top cover of the instrument and make a record of the colors of the wires connected to the PINS 1 to 5 in the original unit. The top cover is removed by removing the four Phillips screws on the back panel and sliding the top cover back and off.
- 2) Unscrew the original module by removing the 2-56 Phillips mounting screws on the bottom surface of the instrument.
- 3) Install the 2-56 screws into the replacement module and transfer the wires (one by one) from the PINS on the original module to the replacement module. Also transfer the RG174 cable.
